

Use Case

Use Case

Create Account

Main Success Scenario

1. The user chooses to sign up.
2. The user enters details including an email address.
3. The system verifies that the email address is a valid university address.
4. The system creates an account and sends a confirmation email.

Alternative Scenario

3a. Email address not valid.

1. The system prompts the user to enter a valid university email address.

Upload documents

Main Success Scenario:

1. The user chooses the file to upload
2. The user then chooses the type of file to be uploaded
3. The user chooses the destination category of file
4. The user then clicks the upload button
5. The system prompts the User the successful message with the number of files uploaded, category of file

Alternative Scenario:

2a. File type not supported:

1. The system prompts User with an error message requesting the user to upload a different type of file

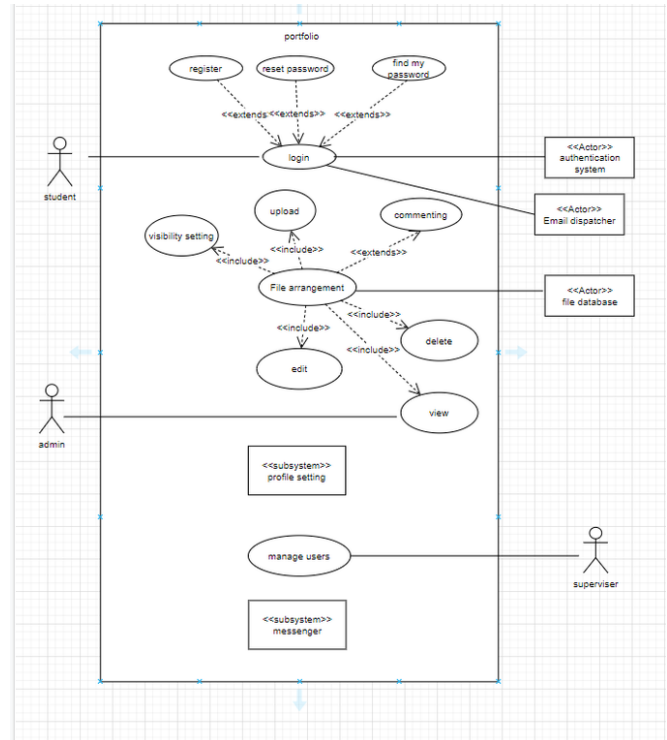

4a. File upload fails:

1. The system prompts the User with a fail message requesting the user to re-upload

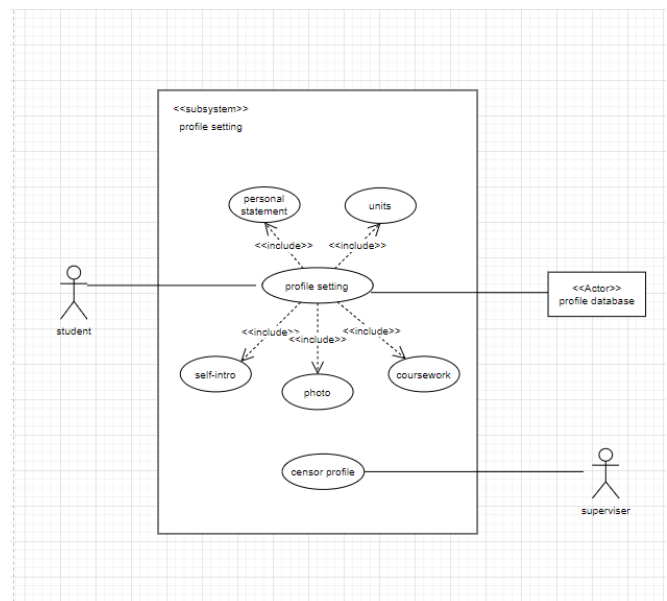

4b. File already exists:

1. The system overwrites old file with a new file
2. The system prompts the User the successful message with the number of files uploaded, category of file

Main System

Subsystem-profile setting

Subsystem-messenger

Searching for Users

Main Success Scenario:

1. User (not logged in) searches for profiles by name
2. System returns a list of relevant profiles
3. User chooses a profile to view.
4. System displays the public view of the profile to the user
