

# Deployment Guide

## System requirements

- nodejs 14
- firebase: you need to setup an account and link it with firebase-cli

## Running locally

- Navigate to the eportfolio folder and run "npm start"
- Navigate to the root folder and run "firebase emulators:start"

## Building the app

1. Navigate to the eportfolio folder and run "npm run build"
2. Navigate to the root folder and run "firebase-deploy" to deploy

## Live app

A live version of the app is available at <https://eportfolio-5head.firebaseio.com/>

## Git Repository

The git repository can be found at <https://github.com/vincent-haoy/IT-Project>
